Danfoss offers a diverse range of compressors suitable for commercial refrigeration, including:

- **Scroll Compressors:** Known for their efficiency and low noise levels, these compressors are ideal for applications like display cabinets and cold rooms.
- **Reciprocating Compressors:** These are designed for both low and high-temperature applications, providing versatility in commercial settings.
- **Screw Compressors:** Primarily used in industrial refrigeration systems, these compressors offer high efficiency and a broad capacity range.

Danfoss compressors are compatible with various refrigerants, including traditional options like R404A and R134A, as well as more environmentally friendly alternatives such as R290 (propane) and R1234yf. These innovations help meet stringent energy regulations globally
